6. Course Program	9

1. Module Description

1.1 Overview

Throughout this module - Recognition of pain, suffering and distress - Species-specific: Farm Animals -, you will learn to identify indications of pain or distress in farm animals utilised for scientific endeavours, specifically ruminants, pigs, and domestic fowl. Additionally, the module will guide them in assessing their welfare condition and determining if they have reached a humane endpoint. Subsequently, you can categorise the severity of procedures and select the optimal analgesic and anaesthetic measures.

This module will cover one topic: Pigs.

If you are visiting the site independently, you should consult the EC Training and Education framework <u>guidance document</u>, which provides an overview of training requirements for individuals with different responsibilities under their relevant national legislation. Additional education and training may be necessary to meet national or institutional requirements.

This document offers suggestions for supporting your training. Each module aligns with the learning outcomes specified by the EU Education & Training framework for laboratory animal science. This module was developed by Dorothy McKeegan, George Stilwell and José Manuel Sánchez Morgado, professionals known for their contributions to animal welfare, veterinary science, and related fields with extensive experience researching, publishing, and training. In addition, an international Reflection Group panel has further refined the content, while Nuno H. Franco managed overall coordination.

Your collaboration and feedback are greatly appreciated, as the module is currently in the testing phase.

1.2 Topics Covered

Pigs

1.3 Learning Objectives

 Understand the anatomy, behavior, and welfare needs of domestic pigs to ensure ethical care and effective management in agricultural and research settings.

To support your ongoing learning, each module concludes with a curated list of recommended readings and cited references. Whenever possible, these references are linked to facilitate further exploration.

2. Prerequisites and Requirements

No specific prior knowledge is required. However, a basic understanding of searching bibliographic databases and a background in laboratory animal science and/or non-animal methods can be advantageous.

This module is designed to guide you step by step, eliminating the need for prior study.

2.1 Requirements

- Completion of lessons and understanding of learning objectives.
- Participation in knowledge checks and assessments to evaluate understanding.

3. Grading and Completion

Grading will be based on the successful completion of knowledge checks and assessments provided at the end of each module. Upon finishing all parts of the module, students will receive a certificate of completion.

4. Textbooks and Reading Materials

The "References and Further Reading" lesson provides most references and readings. They comprise scientific articles, sections of books, websites, and videos. Clicking on any link will open a new window to download or visualise the additional material. Several links to further resources can also be found in the module contents to better guide the reader.

The additional materials provide more information on specific topics, tools, and resources.

5. Course Program

The module is organised into 2 chapters, with lessons and learning objectives as follows:

Chapter	Lesson	Learning objectives		
General introduction	1-4	Get to know the learning objectives		
		Principles of clinical evaluation		
		Humane Endpoints		
		Principles of Pain Management in Rats and Mice		
Pigs	5-14	Introduction		
		Recognise normal and abnormal behaviour		
		Recognise signs of pain		
		Methods for assessing the welfare of animals		
		Humane endpoint		
		Classifications in the Directive		
		Pain management - anaesthesia and analgesia		
		Module summary		
		List of references and further reading		
		Assess your knowledge		

Table 1 - Learning objectives per parts and lessons.

5.1 Progress Tracking

Once you begin working through a module, your progress is tracked, and you can break off and resume your studies at any point. Once the module is completed, the trainee can access any section to refresh their understanding of a topic.

5.2 Module Structure

The module is divided into several parts, and although they were designed to be followed sequentially, they can also be taken iteratively. Please note that a certificate of completion is only issued to learners who complete all module parts.

5.3 In-Depth Explanation Lesson by Lesson

Lesson	Title	LO	Explanation
1	Introduction		Image and short introduction
A1 - Principles of clinical evaluation		Image and short introduction	
		5.3	Animals as patients with 1 image
	The second secon		Causes of illness in research animals with 3 tabs
			How to detect and alleviate the impact of disease with
	evaluation		5-step cards with images
			Potential signs of discomfort, stress, pain with 3 images

			Clinical Associant and Socian with 2 take with image
			Clinical Assessment and Scoring with 3 tabs with images
			and table, 2 images, 1 list
			Frequent assessment of discomfort, pain, distress with 1
			image
			Involvement of all members of the study team and
			awareness of their roles and responsibilities with 1 list
			Image with short summary
		5.4	Image and short introduction
			3 quotes by Russell & Burch
			Endpoints in Biomedical Research with tabs with images, 1
3	A2 - Humane		interactive image and 2 flip-cards
3	Endpoints	3.4	Deciding on the humane endpoints for a procedure
			Defining the actions to be taken with 4 images
			How to refine the Humane Endpoints with 1 image
			Conclusions
			Image and short introduction
			List of session topics
			Pain - Definition, Modulation and Consequences
			The importance of pain assessment
			Quiz: Test yourself: Pain and nociception - the difference
	A2 - Humane		Treatment of pain - which drug should we choose? with 1
4	Endpoints	5.6	table, 1 image
			Analgesia - Pre-emptive and multimodal analgesic regimes
			tabs
			Non-pharmacological management of pain with 1
			interactive image
			Summary of key points
			Image and short introduction
	Doogrice	5.1 5.2	Natural behaviour with 3 images
	Recognise normal and		Social behaviour with 4 images
5	abnormal		Playful behaviour and implications for pig welfare with 1
	behaviour		image, short introduction
			Housing, Foraging, Fighting text descriptions
			Image and short introduction
	Pocognico signa		Pain with notes list
6	Recognise signs of pain	5.2	Pain Assessment with indicators list with 3 tabs with 1
	οι μαιτι		image, 2 references
			-
Methods for assessing the welfare of animals			Image and short introduction Welfare assessment
		5.3	
			Factors in promoting good welfare with a list
			Housing
	allillidis		The Animal Welfare Assessment Grid with diagram, 4 cards,
			4 tabs with images

			Tail posture and motion with 3 flip-cards with images, 3 references
8	Humane endpoint	5.4	Humane endpoints, differentiate them from experimental endpoints, and how to satisfactorily apply them to your animal procedures
9	Classifications in the Directive	5.5	Image and short introduction Severity categories description Examples of non-recovery severity with cards with 2 images Examples of mild severity with cards Examples of moderate severity with cards with 2 images Severe description
10	When to administer anaesthesia or analgesia	5.6	Image and short introduction Anaesthesia with ARRIVE Guidelines Effects of untreated pain with the list When to administer anaesthesia with 2 videos When to administer analgesia description
11	Summary		Module summary
12	References and Further Reading		References for additional materials
13	Knowledge-che ck		Assesses progress and knowledge acquired during the module

Table 2 - Explanation lesson by lesson.

6. Course Program

This module is intended for (bio)medical researchers, participants in laboratory animal science courses, university students, biology/medical teachers, animal welfare body members, regulators, and anyone interested in learning more about animal research ethics and the principles of Replacement, Reduction, and Refinement of animal use for scientific and educational purposes.
